

# The AASHTOWare Project™ Software: A Unified, Integrated Solution

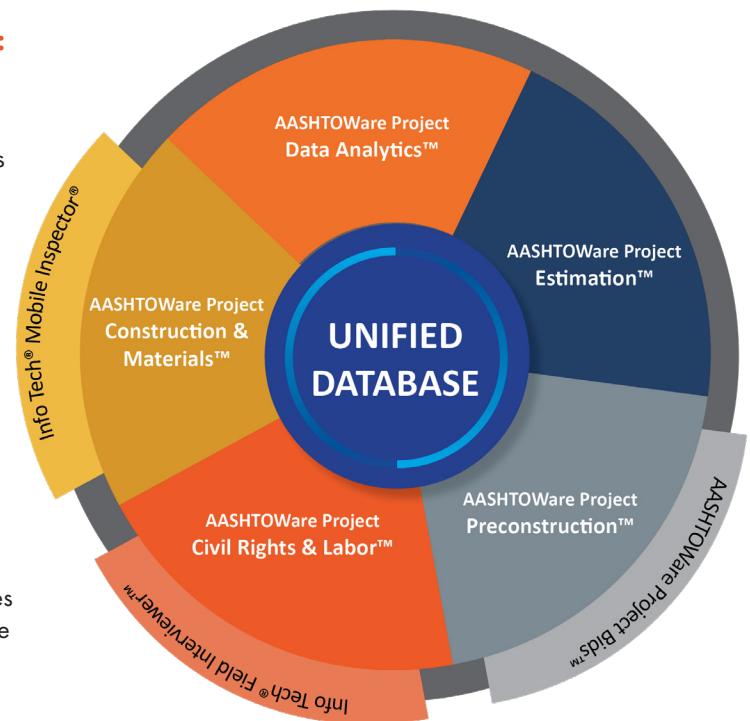

The web-based AASHTOWare Project software is a modular enterprise system with a unified database that provides many benefits in line with the FHWA Every Day Counts (EDC) goal of efficiency through technology and collaboration.

The unified solution promotes cross-departmental collaboration and enhances communication. Data is entered once and used throughout the system, linking all contract phases together. This provides all internal and external users with an integrated view of the contract - including all pertinent information easily accessible in real time, as a single source of truth.

## Additional benefits of an unified database include:

- Improved data sharing across business areas, breaking down data and knowledge silos
- Decreased impacts on IT due to fewer integration complexities
- Increased productivity with ability to analyze information quickly across all departments
- Informed decisions with real-time contract visibility
- Enhanced security due to absence of multiple standalone systems
- Reduced errors due to a single point of data entry and not having to re-enter data multiple times
- Improved implementation planning and execution with ability to add modules based on business needs

It is key for users to understand the points of commonality between the modules and how they are related, along with the dependencies each has with others, where data originates and how it is used. Like the management of a construction contract, communication across the varying business units is essential to the successful use of the AASHTOWare Project software's unified database.

By streamlining communication, allowing for easier integrations and more efficient analysis, the AASHTOWare Project unified database provides a strong foundation for an agency to advance the FHWA EDC and e-Construction initiatives.

## System Specifications

For details about system specifications for all AASHTOWare Project™ products, please refer to [www.aashtowareproject.org/support/sys\\_arch/](http://www.aashtowareproject.org/support/sys_arch/)
